WORLD INTELLECTUAL PROPERTY ORGANIZATION GENEVA

SPECIAL UNION FOR THE INTERNATIONAL CLASSIFICATION OF GOODS AND SERVICES FOR THE PURPOSES OF THE REGISTRATION OF MARKS (NICE UNION)

PREPARATORY WORKING GROUP

Twenty-Eighth Session Geneva, November 16 to 20, 2009

THE CLASSIFICATION OF DIETARY SUPPLEMENTS, FOOD ADDITIVES AND CERTAIN FOODSTUFFS

Document prepared by the International Bureau

INTRODUCTION

1. At its twenty-seventh session, held in Geneva from October 6 to 10, 2008, the Preparatory Working Group did not reach an agreement on the proposals made by the Benelux Organisation for Intellectual Property (BOIP) concerning “enzymes for human consumption” and “enzymatic preparations for human consumption” (see document CLIM/GTP/27/8 Prov. paragraph 14, and proposals BX-27-002 and 003, page 2 of Annex IV). BOIP agreed to withdraw those proposals and to submit, together with Australia, the United States of America and the International Bureau (IB), a more detailed study on the classification of dietary or nutritional supplements in general.

2. It became evident during the preparation of the study that the classification of dietary supplements would be controversial because certain countries consider these products as food while others consider them as drugs. Furthermore, confusion between the classification of dietary supplements and that of food additives could arise. The study should, therefore, include not only dietary supplements but also food additives and, furthermore, meal replacements, dietetic foodstuffs and beverages. It should also clarify the meaning of indications such as “protein for food”, “pectin for food”, “albumen for food”, etc.

3. For the reasons expressed in paragraph 2, the IB has decided to survey the opinion of the Preparatory Working Group on the classification of dietary supplements, food additives and certain foodstuffs at this session and then prepare a more detailed proposal based on the results of the survey for submission to the Preparatory Working Group at its next (twenty-ninth) session.

QUESTIONS

4. The classification of dietary or nutritional supplements is not clearly stated in the Nice Classification. Terms like “dietetic substances adapted for medical use” in the class heading of Cl. 5 hint that there are dietetic substances not adapted for medical purposes that do not belong to Cl. 5. On these grounds, the IB has always considered indications of goods such as “dietary supplements” as too vague for classification purposes and has recommended to clarify whether they are for medical or veterinary purposes (Cl. 5) or not (cl. 29, 30, 31, 32). In the second case, the dietary supplement in question has to be specified in order to establish the correct classification in any of the classes 29 to 32.

5. However, certain products listed in the Alphabetical List of the Nice Classification under the food classes may be confusing, e.g., “Albumen for food”, “Protein for human consumption” and “Alginates for food” in Cl. 29, “Pectin for food”, “Glucose for food”, “Royal jelly for human consumption, not for medical purposes” and “Yeast in pill form, not for medical purposes” in Cl. 30. Are these foodstuffs? Food additives or ingredients for cooking? Food additives for industrial purposes? Dietary supplements? Should dietary supplements, e.g. in pill or tablet form, be considered as foodstuff and classified in the food classes? Furthermore, how should dietetic foodstuffs with special qualities such as “low salt”, “low fat” or “gluten free”, be classified?

6. The IB would like to know the opinion of the Preparatory Working Group members and observers on the following questions:

Dietary or nutritional supplements

7. In general, dietary or nutritional supplements are defined as substances, such as vitamins, minerals, trace elements, amino acids, proteins, herbs, intended to supplement a normal diet or to have health benefits, for ingestion in pill, capsule, tablet, powder or liquid form.

- i. Should these products always be classified in Cl. 5, whether adapted for medical use or not? (It should be noted that goods such as preparations of vitamins, minerals or trace elements are already in the Alphabetical List of the Nice Classification under Cl. 5, without indication of purpose (medical or nutritional)), or
- ii. Should they belong to Cl. 5 only when they are for medical purposes (i.e. for treating a specific medical condition) and to the food classes 29 or 30 when they are for nutritional purposes?
- iii. Where should non-nutritional, health beneficial dietary supplements which can not be said to be adapted for medical purposes be classified?

(In this sense, please also see document CLIM/GTP/28/5, page 6, proposals FR-28-001, 002, 005 and 006).

Food additives

8. Food additives are artificial or natural substances added to foodstuffs, e.g., to improve texture, flavor or color or to preserve foodstuffs. These products are not for ingestion in pill, capsule, tablet, powder or liquid form. They are incorporated in the foodstuffs and cannot be taken in separately.
9. In the Nice Classification, some additives are classified in the food classes 29 or 30 if they are “for food”, others appear in Cl. 1 if they are “for industrial purposes”. An example of this situation is “glucose”: “Glucose for industrial purposes” is in Cl. 1 while “Glucose for food” is in Cl. 30.
 - i. Does “Glucose for industrial purposes” include glucose for the food industry?
 - ii. Does “Glucose for food” include both glucose for the food industry and for culinary purposes?
 - iii. Does “Glucose for food” include glucose dietary supplements in tablet form, e.g. for improving sport performances?

Dietetic food and beverages, meal replacements, food and beverages with special qualities

10. In principle, the classification of dietetic food and beverages should not change: Cl. 5 for those adapted for medical purposes and classes 29, 30 or 32 for those not adapted for medical purposes.
 - i. Should this criterion also be applied to meal replacements, i.e., to foodstuffs such as soups or powders for preparing soups, desserts or powders for preparing desserts, biscuits, prepared meals, cereal bars, etc., containing nutrients or nutritional supplements and intended to replace a whole meal?
 - ii. Should the same criterion be applied to the classification of food and beverages with special qualities, such as “low salt”, “low calories”, “low fat” or “gluten free”?

Indications of goods related to foodstuffs, dietary supplements and food additives

11. The Annex to this document contains a list of indications of goods from the Alphabetical List of the Nice Classification that could be concerned by a possible study related to the classification of dietary supplements, food additives and certain foodstuffs.

12. The Preparatory Working Group is invited to consider the above-mentioned questions and list of indications and to express its views thereon.

[Annex follows]
