A01N PRESERVATION OF BODIES OF HUMANS OR ANIMALS OR PLANTS OR PARTS THEREOF (preservation of food or foodstuff A23); BIOCIDES, e.g. AS DISINFECTANTS, AS PESTICIDES OR AS HERBICIDES (preparations for medical, dental or toilet purposes which kill or prevent the growth or proliferation of unwanted organisms A61K); PEST REPELLANTS OR ATTRACTANTS; PLANT GROWTH REGULATORS (mixtures of pesticides with fertilisers C05G)

### <u>Note(s)</u>

- 1. This subclass <u>covers</u>:
  - compositions, physical forms, methods of application of specific materials or the use of single compounds or compositions;
    chemosterilants for the sexual sterilisation of invertebrates, e.g. insects (sex sterilants for other purposes A61K).
- 2. This subclass <u>does not cover</u> materials which affect the growth of a plant solely by supplying nutrients, i.e. plant food, ordinarily required for growth or materials which are used to prevent or cure mineral deficiencies in plants, e.g. addition of iron chelates to cure iron chlorosis, which materials are covered by class C05.
- 3. In this subclass, the following expression is used with the meaning indicated:
  - "plant growth regulators" are those materials which alter the plant through a chemical modification of the plant metabolism, such as auxins.
- 4. Biocidal, pest repellant, pest attractant or plant growth regulatory activity of compounds or preparations is further classified in subclass A01P.

### <u>Note(s)</u>

- 1. Attention is drawn to the definitions of groups of chemical elements following the title of section C.
- In groups A01N 27/00-A01N 65/00, in the absence of an indication to the contrary, an active ingredient is classified in the last appropriate place.
- 3. A composition, i.e. a mixture of two or more active ingredients is classified in the last of groups A01N 27/00-A01N 65/00 that provides for at least one of these active ingredients.
- 4. Any part of a composition which is not identified by the classification according to Note (3), and which itself is determined to be novel and nonobvious, must also be classified in the last appropriate place in groups A01N 27/00-A01N 65/00. The part can be either a single ingredient or a composition in itself.

- 5. Any part of a composition which is not identified by the classification according to Note (3) or (4), and which is considered to represent information of interest for search, may also be classified in the last appropriate place in groups A01N 27/00-A01N 65/00. This can, for example, be the case when it is considered of interest to enable searching of compositions using a combination of classification symbols. Such non-obligatory classification should be given as "additional information".
- 6. Where a compound is described as existing in tautomeric forms, it is classified as if existing in the form which is classified last in the system.
- Compounds covered by different main groups according to alternatively specified parts of their formulae are classified in every one of the relevant main groups.
- 8. Salts formed between two or more organic compounds are classified as the compound providing the essential ion and it is also classified as the compound providing the other ion.
- 9. Salts or metal chelates of an organic compound are classified as that compound.
- 10. In this subclass, a foodstuff is not considered as an active ingredient.
- 11. Different materials applied in sequence, at different times, are considered as a mixture of all materials employed.
- 12. Synergistic or potentiated compositions are classified as if the synergist or potentiator were an active ingredient.
- In groups A01N 25/00-A01N 65/00, the symbol X means nitrogen, oxygen, sulfur or a halogen; Y means nitrogen, oxygen or sulfur. A dotted line between atoms indicates an optional bond, e.g. ... indicates one or two single bonds or a double bond.

•

- ring system equals the number of scissions necessary to convert the ring system into one acyclic chain. The relevant rings in a condensed system are chosen according to the following criteria consecutively:
  - i. lowest number of ring members,
  - ii. highest number of hetero atoms as ring members.

Ring members shared by two or more rings are regarded as being a member of each of these rings.

- 43/02 having rings with one or more oxygen or sulfur atoms as the only ring hetero atom [3]
