

## SECTION C — CHEMISTRY; METALLURGY

### C01 INORGANIC CHEMISTRY

#### Note(s)

1. In subclasses C01B-C01G, and within each of these subclasses, in the absence of an indication to the contrary, a compound is classified in the last appropriate place, e.g. potassium permanganate is classified only as a permanganate compound, in subclass C01G.
  2. Biocidal, pest repellent, pest attractant or plant growth regulatory activity of compounds or preparations is further classified in subclass A01P.
  3. Processes using enzymes or micro-organisms in order to:
    - i. liberate, separate or purify a pre-existing compound or composition, or to
    - ii. treat textiles or clean solid surfaces of materials
- are further classified in subclass C12S.

#### **C01B NON-METALLIC ELEMENTS; COMPOUNDS THEREOF** (fermentation or enzyme-using processes for the preparation of elements or inorganic compounds except carbon dioxide C12P 3/00; production of non-metallic elements or inorganic compounds by electrolysis or electrophoresis C25B)

#### Note(s)

1. In this subclass, tradenames that are often found in scientific and patent literature have been used in order to define precisely the scope of the groups.
2. Attention is drawn to the definitions of groups of chemical elements following the title of section C.
3. Attention is drawn to Note (1) after class C01, which defines the last place priority rule applied in this class, i.e. in the range of subclasses C01B-C01G and within these subclasses.
4. Therapeutic activity of compounds is further classified in subclass A61P.

#### Subclass index

HYDROGEN; HYDROGEN ISOTOPES; WATER; HYDRIDES.....	3/00, 4/00, 5/00, 6/00
SYNTHESIS GAS.....	3/00
HALOGENS OR THEIR COMPOUNDS.....	7/00, 9/00, 11/00
OXYGEN, OXIDES IN GENERAL; PER-COMPOUNDS.....	13/00, 15/00
SULFUR, COMPOUNDS THEREOF.....	17/00
NITROGEN, COMPOUNDS THEREOF.....	21/00
PHOSPHORUS, COMPOUNDS THEREOF.....	25/00
CARBON, COMPOUNDS THEREOF.....	31/00
SILICON, COMPOUNDS THEREOF.....	33/00
SELENIUM OR TELLURIUM; BORON.....	19/00, 35/00
NOBLE GASES.....	23/00
COMPOUNDS HAVING MOLECULAR SIEVE PROPERTIES BUT NOT HAVING BASE-EXCHANGE PROPERTIES.....	37/00
COMPOUNDS HAVING MOLECULAR SIEVE AND BASE-EXCHANGE PROPERTIES.....	39/00

#### Hydrogen; Hydrides; Water; Synthesis gas from hydrocarbons

3/00	Hydrogen; Gaseous mixtures containing hydrogen; Separation of hydrogen from mixtures containing it; Purification of hydrogen (production of water-gas or synthesis gas from solid carbonaceous material C10J) [3]	3/06	• • by reaction of inorganic compounds containing electro-positively bound hydrogen, e.g. water, acids, bases, ammonia, with inorganic reducing agents (by electrolysis of water C25B 1/04) [3]
3/02	• Production of hydrogen or of gaseous mixtures containing hydrogen [3]	3/08	• • • with metals [3]
3/04	• • by decomposition of inorganic compounds, e.g. ammonia [3]	3/10	• • • by reaction of water vapour with metals [3]
		3/12	• • • by reaction of water vapour with carbon monoxide [3]
		3/14	• • • Handling of heat and steam [3]
		3/16	• • • using catalysts [3]
		3/18	• • • using moving solid particles [3]
		3/20	• • • by reaction of metal hydroxides with carbon monoxide [3]

### Oxygen: Oxides or hydroxides in general; Per-compounds

**13/00 Oxygen; Ozone; Oxides or hydroxides in general**

13/02 • Preparation of oxygen (by liquefying F25J)

13/08 • from air with the aid of metal oxides, e.g. barium oxide, manganese oxide

13/10 • Preparation of ozone

13/11	• • by electric discharge [2]	17/06	• • from non-gaseous sulfides or materials containing such sulfides, e.g. ores
13/14	• Methods for preparing oxides or hydroxides in general (particular individual oxides or hydroxides, <u>see</u> the relevant groups of subclasses C01B-C01G or C25B, according to the element combined with the oxygen or hydroxy group)	17/10	• • Finely-divided sulfur, e.g. sublimed sulfur, flowers of sulfur
13/16	• • Purification [3]	17/12	• • Insoluble sulfur (mu-sulfur)
13/18	• • by thermal decomposition of compounds, e.g. of salts or hydroxides [3]	17/16	• Hydrogen sulfides
13/20	• • by oxidation of elements in the gaseous state; by oxidation or hydrolysis of compounds in the gaseous state [3]	17/18	• • Hydrogen polysulfides
13/22	• • • of halides or oxyhalides [3]	17/20	• Methods for preparing sulfides or polysulfides, in general (ammonium sulfides or polysulfides C01C; sulfides or polysulfides of metals, other than alkali metals, magnesium, calcium, strontium, and barium, <u>see</u> the relevant groups of subclasses C01F or C01G, according to the metal)
13/24	• • • in the presence of hot combustion gases [3]	17/22	• Alkali metal sulfides or polysulfides
13/26	• • • in the presence of a fluidised bed [3]	17/24	• • Preparation by reduction
13/28	• • • using a plasma or an electric discharge [3]	17/26	• • • with carbon
13/30	• • • Removal and cooling of the oxide containing suspension [3]	17/28	• • • with reducing gases
13/32	• • by oxidation or hydrolysis of elements or compounds in the liquid or solid state [3]	17/30	• • Preparation from sodium or potassium amalgam with sulfur or sulfides
13/34	• • by oxidation or hydrolysis of sprayed or atomised solutions [3]	17/32	• • Hydrosulfides of sodium or potassium
13/36	• • by precipitation reactions in solutions [3]	17/34	• • Polysulfides of sodium or potassium
<b>15/00</b>	<b>Peroxides; Peroxyhydrates; Peroxyacids or salts thereof; Superoxides; Ozonides</b>	17/36	• • Purification
15/01	• Hydrogen peroxide [3]	17/38	• • Dehydration
15/013	• • Separation; Purification; Concentration [3]	17/40	• • Making shaped products, e.g. granules
15/017	• • • Anhydrous hydrogen peroxide; Anhydrous solutions or gaseous mixtures containing hydrogen peroxide [3]	17/42	• • Sulfides or polysulfides of magnesium, calcium, strontium, or barium
15/022	• • Preparation from organic compounds [2]	17/43	• • from oxides or hydroxides with sulfur or hydrogen sulfide
15/023	• • • by the alkyl-antraquinone process [3]	17/44	• • by reduction of sulfates
15/024	• • • from hydrocarbons [3]	17/45	• Compounds containing sulfur and halogen, with or without oxygen
15/026	• • • from alcohols [3]	17/46	• Compounds containing sulfur, halogen, hydrogen, and oxygen
15/027	• • Preparation from water [3]	17/48	• Sulfur dioxide; Sulfurous acid
15/029	• • Preparation from hydrogen and oxygen [3]	17/50	• • Preparation of sulfur dioxide
15/03	• • Preparation from inorganic peroxy-compounds, e.g. from peroxy sulfates [3]	17/52	• • • by roasting sulfides (C22B 1/00 takes precedence)
15/032	• • • from metal peroxides [3]	17/54	• • • by burning elemental sulfur
15/037	• • Stabilisation by additives [3]	17/56	• • • Separation; Purification
15/04	• Metal peroxides or peroxyhydrates thereof; Superoxides; Ozonides [3]	17/58	• • • Recovery of sulfur dioxide from acid tar or the like
15/043	• • of alkali metals, alkaline earth metals or of magnesium [2, 3]	17/60	• • • Isolation of sulfur dioxide from gases
15/047	• • of heavy metals [2, 3]	17/62	• Methods of preparing sulfites in general (particular individual sulfites, <u>see</u> the relevant groups of subclasses C01B-C01G, according to the cation)
15/055	• Peroxyhydrates (C01B 15/04 takes precedence); Peroxyacids or salts thereof [3]	17/64	• Thiosulfates; Dithionites; Polythionates
15/06	• • containing sulfur [3]	17/66	• • Dithionites
15/08	• • • Peroxysulfates [3]	17/69	• • Sulfur trioxide; Sulfuric acid [3]
15/10	• • containing carbon [3]	17/70	• • Stabilisation of gamma-form sulfur trioxide
15/12	• • containing boron [3]	17/74	• • Preparation [3]
15/14	• • containing silicon [3]	17/76	• • • by contact processes
15/16	• • containing phosphorus [3]	17/765	• • • Multi-stage SO <sub>3</sub> -conversion [3]
		17/77	• • • Fluidised-bed processes [3]
		17/775	• • • Liquid phase contacting processes or wet catalysis processes [3]
		17/78	• • • characterised by the catalyst used
		17/79	• • • • containing vanadium [3]
		17/80	• • • Apparatus
		17/82	• • • of sulfuric acid using a nitrogen oxide process
		17/84	• • • Chamber process
		17/86	• • • Tower process
		17/88	• • Concentration of sulfuric acid
		17/90	• • Separation; Purification
		17/92	• • • Recovery from acid tar or the like
		17/94	• • • Recovery from nitration acids

17/96	<ul style="list-style-type: none"> <li>Methods for the preparation of sulfates in general (particular individual sulfates, <u>see</u> the relevant groups of subclasses C01B-C01G, according to the cation)</li> </ul>	25/00	<b>Phosphorus; Compounds thereof</b> (C01B 21/00, C01B 23/00 take precedence; perphosphates C01B 15/16) [3]

23/00	<b>Noble gases; Compounds thereof</b> (liquefying F25J)		

25/41	• • • • • of alkali metals [3]	33/035	• • • • by decomposition or reduction of gaseous or vaporised silicon compounds in the presence of heated filaments of silicon, carbon or a refractory metal, e.g. tantalum or tungsten, or in the presence of heated silicon rods on which the formed silicon is deposited, a silicon rod being obtained, e.g. Siemens process [5]
25/42	• • • • Pyrophosphates [2]	33/037	• • • Purification (by zone-melting C30B 13/00) [5]
25/44	• • • • Metaphosphates [2]	33/039	• • • by conversion of the silicon into a compound, optional purification of the compound, and reconversion into silicon [5]
25/45	• • • containing plural metal, or metal and ammonium [3]	33/04	• Hydrides of silicon
25/45	• • • containing halogen [3]	33/06	• Metal silicides
25/46	• • Preparation involving solvent-solvent extraction [2]	33/08	• Compounds containing halogen
<b>31/00 Carbon; Compounds thereof</b> (C01B 21/00, C01B 23/00 take precedence; percarbonates C01B 15/10; carbon black C09C 1/48) [3]		33/10	• • Compounds containing silicon, fluorine, and other elements
31/02	• Preparation of carbon (by using ultra-high pressure, e.g. for the formation of diamonds, B01J 3/06; by crystal growth C30B); Purification	33/107	• • Halogenated silanes [3]
31/04	• • Graphite	33/113	• Silicon oxides; Hydrates thereof [3]
31/06	• • Diamond	33/12	• • Silica; Hydrates thereof, e.g. lepidioic silicic acid [3]
31/08	• Active carbon	33/14	• • • Colloidal silica, e.g. dispersions, gels, sols [3]
31/10	• • Preparation by using gaseous activating agents	33/141	• • • • Preparation of hydrosols or aqueous dispersions [3]
31/12	• • Preparation by using non-gaseous activating agents	33/142	• • • • by acidic treatment of silicates [3]
31/14	• • Granulation	33/143	• • • • of aqueous solutions of silicates [3]
31/16	• Preparation of ion-exchanging materials from carbonaceous material	33/145	• • • • Preparation of hydroorganosols, organosols or dispersions in an organic medium [3]
31/18	• Carbon monoxide	33/146	• • • • After-treatment of sols (preparation of hydroorganosols, organosols or dispersions in an organic medium from hydrosols C01B 33/145) [3]
31/20	• Carbon dioxide	33/148	• • • • Concentration; Drying; Dehydration; Stabilisation; Purification [3]
31/22	• • Solidifying	33/149	• • • • Coating [3]
31/24	• Methods for the preparation of carbonates or bicarbonates in general (percarbonates C01B 15/10; particular individual carbonates, <u>see</u> the relevant groups of subclasses C01B-C01G, according to the cation)	33/151	• • • • by progressively adding a sol to a different sol, i.e. "build up" of particles using a "heel" [3]
31/26	• Compounds containing carbon and sulfur, e.g. carbon disulfide, carbon oxysulfide; Thiophosgene	33/152	• • • • Preparation of hydrogels [3]
31/28	• Phosgene	33/154	• • • • by acidic treatment of aqueous silicate solutions [3]
31/30	• Carbides	33/155	• • • • Preparation of hydroorganogels or organogels [3]
31/32	• • Calcium carbide	33/157	• • • • After-treatment of gels [3]
31/34	• • Tungsten or molybdenum carbides	33/158	• • • • Purification; Drying; Dehydrating [3]
31/36	• • Carbides of silicon or boron	33/159	• • • • Coating or hydrophobisation [3]
<b>33/00 Silicon; Compounds thereof</b> (C01B 21/00, C01B 23/00 take precedence; persilicates C01B 15/14; carbides C01B 31/36) [3]		33/16	• • • Preparation of silica xerogels [3]
33/02	• Silicon (forming single crystals or homogeneous polycrystalline material with defined structure C30B) [5]	33/18	• • • Preparation of finely divided silica neither in sol nor in gel form; After-treatment thereof (treatment to enhance the pigmenting or filling properties C09C) [3]
33/021	• • Preparation (chemical coating from the vapour phase C23C 16/00) [5]	33/187	• • • • by acidic treatment of silicates [3]
33/023	• • • by reduction of silica or silica-containing material [5]	33/193	• • • • of aqueous solutions of silicates [3]
33/025	• • • • with carbon or a solid carbonaceous material, i.e. carbo-thermal process [5]	33/20	• Silicates (persilicates C01B 15/14)
33/027	• • • by decomposition or reduction of gaseous or vaporised silicon compounds other than silica or silica-containing material [5]	33/22	• • Magnesium silicates
33/029	• • • • by decomposition of monosilane [5]	33/24	• • Alkaline earth metal silicates
33/03	• • • • by decomposition of silicon halides or halosilanes or reduction thereof with hydrogen as the only reducing agent [5]	33/26	• • Aluminium-containing silicates [5]
33/031	• • • • by decomposition of silicon tetraiodide [5]	33/32	• • Alkali metal silicates (C01B 33/26 takes precedence) [3]
33/033	• • • • by reduction of silicon halides or halosilanes with a metal or a metallic alloy as the only reducing agents [5]	33/36	• • having base-exchange properties but not having molecular sieve properties [6]
		33/38	• • • Layered base-exchange silicates, e.g. clays, micas or alkali metal silicates of kenyait or magadiite type [6]
		33/40	• • • • Clays [6]
		33/42	• • • • Micas [6]

**Note(s)**

In this group, the following term is used with the meaning indicated:

- "zeolites" means:
  - i. crystalline aluminosilicates with base-exchange and molecular sieve properties, having three dimensional, microporous lattice framework structure of tetrahedral oxide units;

**C01C AMMONIA; CYANOGEN; COMPOUNDS THEREOF** (salts of oxyacids of halogens C01B 11/00; peroxides, salts of peroxyacids C01B 15/00; thiosulfates, dithionites, polythionates C01B 17/64; compounds containing selenium or tellurium C01B 19/00; azides C01B 21/08; metal amides C01B 21/092; nitrites C01B 21/50; phosphides C01B 25/08; salts of oxyacids of phosphorus C01B 25/16; compounds containing silicon C01B 33/00; compounds containing boron C01B 35/00; fermentation or enzyme-using processes for the preparation of elements or inorganic compounds except carbon dioxide C12P 3/00; production of non-metallic elements or inorganic compounds by electrolysis or electrophoresis C25B)

#### Note(s)

1. Attention is drawn to Note (1) after class C01, which defines the last place priority rule applied in this class, i.e. in the range of subclasses C01B-C01G and within these subclasses.
2. Therapeutic activity of compounds is further classified in subclass A61P.

#### **1/00 Ammonia; Compounds thereof**

- 1/02 • Preparation or separation of ammonia
- 1/04 • • Preparation of ammonia by synthesis (preparation or purification of gas mixtures for ammonia synthesis C01B 3/02)
- 1/08 • • Preparation of ammonia from nitrogenous organic substances
- 1/10 • • Separation of ammonia from ammonia liquors, e.g. gas liquors
- 1/12 • • Separation of ammonia from gases and vapours
- 1/14 • • • Saturators
- 1/16 • Halides of ammonium
- 1/18 • Nitrates of ammonium
- 1/20 • Sulfides; Polysulfides
- 1/22 • Sulfites of ammonium
- 1/24 • Sulfates of ammonium (C01C 1/14 takes precedence)
- 1/242 • • Preparation from ammonia and sulfuric acid or sulfur trioxide [2]
- 1/244 • • Preparation by double decomposition of ammonium salts with sulfates [2]
- 1/245 • • Preparation from compounds containing nitrogen and sulfur [2]
- 1/246 • • • from sulfur-containing ammonium compounds [2]
- 1/247 • • • by oxidation with free oxygen [2]
- 1/248 • • Preventing coalescing or controlling form or size of crystals [2]
- 1/249 • • Deacidifying the crystals [2]

- 1/26 • Carbonates or bicarbonates of ammonium
- 1/28 • Methods of preparing ammonium salts in general

#### Note(s)

1. This group does not cover ammonium salts of complex acids (other than complex cyanides) containing a metal in the anion, which are covered by the relevant groups of subclasses C01D-C01G, according to the metal.
2. Salts of polybasic acids with ammonium and a metal as cations are classified as though the ammonium were hydrogen.
3. Complex ammine salts are classified in the relevant groups of subclasses C01D-C01G, according to the metal.

#### **3/00 Cyanogen; Compounds thereof**

- 3/02 • Preparation of hydrogen cyanide
- 3/04 • • Separation from gases
- 3/06 • Stabilisation of hydrogen cyanide
- 3/08 • Simple or complex cyanides of metals
- 3/10 • • Simple alkali metal cyanides [3]
- 3/11 • • Complex cyanides [3]
- 3/12 • • Simple or complex iron cyanides [2]
- 3/14 • Cyanic acid; Salts thereof
- 3/16 • Cyanamide; Salts thereof
- 3/18 • • Calcium cyanamide
- 3/20 • Thiocyanic acid; Salts thereof

**C01D COMPOUNDS OF ALKALI METALS, i.e. LITHIUM, SODIUM, POTASSIUM, RUBIDIUM, CAESIUM, OR FRANCIUM** (metal hydrides C01B 6/00; salts of oxyacids of halogens C01B 11/00; peroxides, salts of peroxyacids C01B 15/00; sulfides or polysulfides C01B 17/22; thiosulfates, dithionites, polythionates C01B 17/64; compounds containing selenium or tellurium C01B 19/00; binary compounds of nitrogen with metals C01B 21/06; azides C01B 21/08; metal amides C01B 21/092; nitrites C01B 21/50; phosphides C01B 25/08; salts of oxyacids of phosphorus C01B 25/16; carbides C01B 31/30; compounds containing silicon C01B 33/00; compounds containing boron C01B 35/00; cyanides C01C 3/08; salts of cyanic acid C01C 3/14; salts of cyanamide C01C 3/16; thiocyanates C01C 3/20; fermentation or enzyme-using processes for the preparation of elements or inorganic compounds except carbon dioxide C12P 3/00; obtaining metal compounds from mixtures, e.g. ores, which are intermediate compounds in a metallurgical process for obtaining a free metal C22B; production of non-metallic elements or inorganic compounds by electrolysis or electrophoresis C25B)

#### Note(s)

1. Attention is drawn to Note (1) after class C01, which defines the last place priority rule applied in this class, i.e. in the range of subclasses C01B-C01G and within these subclasses.
2. Therapeutic activity of compounds is further classified in subclass A61P.

#### **1/00 Oxides or hydroxides of sodium, potassium, or alkali metals in general [2]**

- 1/02 • Oxides
- 1/04 • Hydroxides

- 1/20 • • Preparation by reacting oxides or hydroxides with alkali metal salts
- 1/22 • • • with carbonates or bicarbonates
- 1/24 • • • from or via fluorides or silico-fluorides

#### Note(s)

1. Attention is drawn to Note (1) after class C01, which defines the last place priority rule applied in this class, i.e. in the range of subclasses C01B-C01G and within these subclasses.
2. Therapeutic activity of compounds is further classified in subclass A61P.

<b>1/00 Methods of preparing compounds of the metals beryllium, magnesium, aluminium, calcium, strontium, barium, radium, thorium, or the rare earths, in general</b>	7/06	• • • by treating aluminous minerals with alkali hydroxide
	7/08	• • • by treating aluminous minerals with sodium carbonate
	7/10	• • • by treating aluminous minerals with alkali sulfates and reducing agents
	7/12	Alkali metal aluminates from alkaline earth metal aluminates
<b>3/00 Compounds of beryllium</b>	7/14	• • • Aluminium oxide or hydroxide from alkali metal aluminates
3/02 • Oxides; Hydroxides [3]	7/16	Preparation of alkaline earth metal aluminates; Aluminium oxide or hydroxide therefrom
<b>5/00 Compounds of magnesium</b>	7/18	• • • Aluminium oxide or hydroxide from alkaline earth metal aluminates
5/02 • Magnesia	7/20	Preparation of aluminium oxide or hydroxide from aluminous ores with acids or salts
5/04 • • by oxidation of metallic magnesium	7/22	• • • with halides
5/06 • • by thermal decomposition of magnesium compounds (calcining magnesite or dolomite C04B 2/10)	7/24	• • • with nitric acid or nitrogen oxides
5/08 • • • by calcining magnesium hydroxide	7/26	• • • with sulfuric acids or sulfates
5/10 • • • by thermal decomposition of magnesium chloride with water vapour	7/28	• • • with sulfurous acid
5/12 • • • by thermal decomposition of magnesium sulfate, with or without reduction	7/30	Preparation of aluminium oxide or hydroxide by thermal decomposition of aluminium compounds
5/14 • Magnesium hydroxide	7/32	• • • of sulfates
5/16 • • by treating magnesia, e.g. calcined dolomite, with water or solutions of salts not containing magnesium	7/34	Preparation of aluminium hydroxide by precipitation from solutions containing aluminium salts
5/20 • • by precipitation from solutions of magnesium salts with ammonia	7/36	• • • from organic aluminium salts
5/22 • • from magnesium compounds with alkali hydroxides or alkaline earth oxides or hydroxides	7/38	Preparation of aluminium oxide by thermal reduction of aluminous minerals
5/24 • Magnesium carbonates	7/40	• • • in the presence of aluminium sulfide
5/26 • Magnesium halides	7/42	Preparation of aluminium oxide or hydroxide from metallic aluminium, e.g. by oxidation
5/28 • • Fluorides	7/44	Dehydration of aluminium hydroxide
5/30 • • Chlorides	7/46	Purification of aluminium oxide, aluminium hydroxide or aluminates [5]
5/32 • • • Preparation of anhydrous magnesium chloride by chlorinating magnesium compounds	7/47	• • • of aluminates [5]
5/34 • • • Dehydrating magnesium chloride containing water of crystallisation	7/48	Aluminium halides
5/36 • • Bromides	7/50	• • • Fluorides
5/38 • Magnesium nitrates	7/52	• • • Double compounds containing both fluorine and other acid groups
5/40 • Magnesium sulfates (double sulfates of magnesium with sodium or potassium C01D 5/12, with other alkali metals C01D 15/06, C01D 17/00) [3]	7/54	• • • Double compounds containing both aluminium and alkali metals or alkaline earth metals
5/42 • Magnesium sulfites	7/56	Chlorides (containing fluorine C01F 7/52) [3]
<b>7/00 Compounds of aluminium</b>	7/58	• • • Preparation of anhydrous aluminium chloride
7/02 • Aluminium oxide; Aluminium hydroxide; Aluminates	7/60	• • • from oxygen-containing aluminium compounds
7/04 • • Preparation of alkali metal aluminates; Aluminium oxide or hydroxide therefrom		

**C01F**

7/62	• • • Purification	11/24	• • Chlorides
7/64	• • Bromides (containing fluorine C01F 7/52) [3]	11/26	• • • from sulfides
7/66	• Aluminium nitrates (containing fluorine C01F 7/52) [3]	11/28	• • • by chlorination of alkaline earth metal compounds
7/68	• Aluminium compounds containing sulfur (containing fluorine C01F 7/52) [3]	11/30	• • • Concentrating; Dehydrating; Preventing the absorption of moisture or caking
7/70	• • Sulfides	11/32	• • • Purification
7/72	• • Sulfites	11/34	• • Bromides
7/74	• • Sulfates	11/36	• Nitrates
7/76	• • • Double salts, e.g. alums	11/38	• • Preparation with nitric acid or nitrogen oxides
<b>11/00</b>	<b>Compounds of calcium, strontium, or barium (C01F 7/00 takes precedence) [3]</b>	11/40	• • Preparation by double decomposition with nitrates
11/02	• Oxides or hydroxides (production of lime C04B 2/00)	11/42	• • Double salts (with magnesium C01F 5/38)
11/04	• • by thermal decomposition	11/44	• • Concentrating; Crystallising; Dehydrating; Preventing the absorption of moisture or caking
11/06	• • • of carbonates	11/46	• Sulfates (dehydration of gypsum C04B 11/02)
11/08	• • by reduction of sulfates	11/48	• Sulfites
11/10	• • from sulfides		
11/12	• • from silicates		
11/16	• • Purification		
11/18	• Carbonates		
11/20	• Halides		
11/22	• • Fluorides		
		<b>13/00</b>	<b>Compounds of radium</b>
		<b>15/00</b>	<b>Compounds of thorium</b>
		<b>17/00</b>	<b>Compounds of the rare-earth metals, i.e. scandium, yttrium, lanthanum, or the group of the lanthanides</b>

**C01G COMPOUNDS CONTAINING METALS NOT COVERED BY SUBCLASSES C01D OR C01F** (metal hydrides C01B 6/00; salts of oxyacids of halogens C01B 11/00; peroxides, salts of peroxyacids C01B 15/00; thiosulfates, dithionites, polythionates C01B 17/64; compounds containing selenium or tellurium C01B 19/00; binary compounds of nitrogen with metals C01B 21/06; azides C01B 21/08; metal amides C01B 21/092; nitrites C01B 21/50; phosphides C01B 25/08; salts of oxyacids of phosphorus C01B 25/16; carbides C01B 31/30; compounds containing silicon C01B 33/00; compounds containing boron C01B 35/00; compounds having molecular sieve properties but not having base-exchange properties C01B 37/00; compounds having molecular sieve and base-exchange properties, e.g. crystalline zeolites, C01B 39/00; cyanides C01C 3/08; salts of cyanic acid C01C 3/14; salts of cyanamide C01C 3/16; thiocyanates C01C 3/20; fermentation or enzyme-using processes for the preparation of elements or inorganic compounds except carbon dioxide C12P 3/00; obtaining metal compounds from mixtures, e.g. ores, which are intermediate compounds in a metallurgical process for obtaining a free metal C21B, C22B; production of non-metallic elements or inorganic compounds by electrolysis or electrophoresis C25B)

**Note(s)**

- Attention is drawn to Note (1) after class C01, which defines the last place priority rule applied in this class, i.e. in the range of subclasses C01B-C01G and within these subclasses.
- Therapeutic activity of compounds is further classified in subclass A61P.

**Subclass index**

GENERAL METHODS OF PREPARATION.....	1/00
METALLIC COMPOUNDS, IN ALPHABETICAL ORDER OF THE SYMBOL FOR THE METAL	
Ag Silver.....	5/00
As Arsenic.....	28/00
Au Gold.....	7/00
Bi Bismuth.....	29/00
Cd Cadmium.....	11/00
Co Cobalt.....	51/00
Cr Chromium.....	37/00
Cu Copper.....	3/00
Fe Iron.....	49/00
Ga Gallium.....	15/00
Ge Germanium.....	17/00
Hf Hafnium.....	27/00
Hg Mercury.....	13/00
In Indium.....	15/00
Ir Iridium.....	55/00
Mn Manganese.....	45/00
Mo Molybdenum.....	39/00
Nb Niobium.....	33/00
Ni Nickel.....	53/00
Os Osmium.....	55/00
Pb Lead.....	21/00

Pd Palladium.....	55/00
Pt Platinum.....	55/00
Re Rhenium.....	47/00
Rh Rhodium.....	55/00
Ru Ruthenium.....	55/00
Sb Antimony.....	30/00
Sn Tin.....	19/00
Ta Tantalum.....	35/00
Ti Titanium.....	23/00
Tl Thallium.....	15/00
U Uranium.....	43/00
V Vanadium.....	31/00
W Tungsten.....	41/00
Zn Zinc.....	9/00
Zr Zirconium.....	25/00
COMPOUNDS OF TRANSURANIC ELEMENTS.....	56/00
COMPOUNDS OF METALS NOT COVERED BY THE PRECEDING GROUPS.....	99/00

<b>1/00 Methods of preparing compounds of metals not covered by subclasses C01B, C01C, C01D, C01F, in general (electrolytic production of inorganic compounds C25B 1/00) [2]</b>	<b>19/00 Compounds of tin</b>
1/02 • Oxides	19/02 • Oxides
1/04 • Carbonyls	19/04 • Halides
1/06 • Halides	19/06 • • Stannous chloride
1/08 • Nitrates	19/08 • • Stannic chloride
1/10 • Sulfates	<b>21/00 Compounds of lead</b>
