SECTION B — PERFORMING OPERATIONS; TRANSPORTING

B01 PHYSICAL OR CHEMICAL PROCESSES OR APPARATUS IN GENERAL

B01B BOILING; BOILING APPARATUS

1/00 Boiling; Boiling apparatus for physical or chemical purposes [1, 2, 2006.01]

1/06 • Preventing bumping **[1, 2006.01]**

1/02 • Preventing foaming **[1, 2006.01]**

1/08 • Boiling apparatus provided with reflux condenser [1, 2006.01]

1/04 • • by chemical means **[1, 2006.01]**

B01D SEPARATION (separating solids from solids by wet methods B03B, B03D, by pneumatic jigs or tables B03B, by other dry methods B07; magnetic or electrostatic separation of solid materials from solid materials or fluids, separation by high-voltage electric fields B03C; centrifuges B04B; vortex apparatus B04C; presses <u>per se</u> for squeezing-out liquid from liquid-containing material B30B 9/02) **[5]**

Note(s) [5]

- 1. This subclass <u>covers</u>:
 - evaporation, distillation, crystallisation, filtration, dust precipitation, gas cleaning, absorption, adsorption;
 - similar processes which are not concerned with, or limited to, separation, except in the case of absorption or adsorption.
- 2. In this subclass, the terms or expressions are used with the meaning indicated:
 - "filtration" and analogous terms include straining solids from fluids. Filtration is a process that normally uses a filter medium;
 - "filter medium" is a porous material or porous arrangement of material used to filter solids from fluids;
 - "filtering element" is a section of filter medium in addition to parts to which the medium is demountably or permanently fixed, including other sections of medium, end caps, peripheral frames or edge strips, but excluding housings;
 - "filter housing" is the fluid-constraining impervious vessel, whether open or closed, which contains, or is adapted to contain, one or more filtering elements or filter media;
 - "filter chamber" is the space within a housing, where filtering elements or filter media are located. Partitions may divide a single housing into a plurality of chambers;
 - "filtering apparatus" consists of filtering elements combined with housings, cleaning arrangements, motor or the like parts, which are characteristic of the particular type of apparatus. Ancillary devices such as pumps or valves are considered part of a filtering apparatus when inside the apparatus. Ancillary devices performing similar or different unit operation such as comminutors, mixers or non-filtering separators, whether or not inside the apparatus, are not considered part of a filtering apparatus. The term does not extend to apparatus, e.g. washing machines, of which the filter forms only a part.
- 3. For apparatus used in drying or evaporation, class F26 takes precedence over this subclass.
- 4. Group B01D 59/00 takes precedence over the other groups of this subclass and over other subclasses in class B01.

B01J CHEMICAL OR PHYSICAL PROCESSES, e.g. CATALYSIS OR COLLOID CHEMISTRY; THEIR RELEVANT APPARATUS [2]

Note(s) [2, 3, 6]

- 1. In this subclass, the following terms or expressions are used with the meanings indicated:
 - "solid particles" includes such particles whether catalysts, reactants or inert in solid, semi-solid or pasty state;
 - "fluidised particles" means finely divided solid particles lifted and agitated by a stream of fluid;
 - "fluidised-bed technique" means fluid-solid contacting technique in which finely divided particles are lifted and agitated by a rising stream of fluid, said stream having such a speed as to form a lower dense phase (the "bed") and an upper dilute fluidised phase of "fluidised particles";
 - "processes conducted in the presence of solid particles" does not include processes wherein the only solid particles present are formed during the reaction.
- 2. In this subclass, tradenames that are often found in scientific and patent literature have been used in order to define precisely the scope of the groups.

membranes (electrodialysis or electro-osmosis	49/75 • of water softeners [2017.01]
B01D 61/42) [3, 2006.01, 2017.01]	49/80 • Automatic regeneration [2017.01]
47/127 • • in the form of filaments or fibres [2017.01]	49/85 • • Controlling or regulating devices
47/133 • • Precoat filters [2017.01]	therefor [2017.01]
47/14 • Controlling or regulating [3, 2006.01, 2017.01]	• having devices which prevent back-flow of the ion-
47/15 • • for obtaining a solution having a fixed pH [2017.01]	exchange mass during regeneration [2017.01]

B01L CHEMICAL OR PHYSICAL LABORATORY APPARATUS FOR GENERAL USE (apparatus for medical or pharmaceutical purposes A61; apparatus for industrial purposes or laboratory apparatus whose construction and performance are comparable to that of similar industrial apparatus, <u>see</u> the relevant classes for industrial apparatus, particularly subclasses of B01 and C12; separating or distilling apparatus B01D; mixing or stirring devices B01F; atomisers B05B; sieves B07B; corks, bungs B65D; handling liquids in general B67; vacuum pumps F04; siphons F04F 10/00; taps, stop-cocks F16K; tubes, tube joints F16L; apparatus specially adapted for investigating or analysing materials G01, particularly G01N; electrical or optical apparatus, <u>see</u> the relevant classes in sections G and H)

Note(s)

This subclass <u>covers</u> only laboratory apparatus which is either applicable solely to laboratory purposes or which, by reason of its simple construction and adaptability, is such as would not be suitable for industrial use.

1/00	Enclosures; Chambers (fume cupboards B08B; provided with manipulation devices, glove boxes B25J; cooling chambers F25D) [1, 2006.01]	3/12 3/14 3/16	 Gas jars or cylinders [1, 2006.01] Test tubes [1, 2006.01] Retorts [1, 2006.01]
1/02	 Air-pressure chambers; Air-locks therefor [1, 2006.01] 	3/18	• Spatulas [1, 2006.01]
1/04	• Dust-free rooms or enclosures [1, 2006.01]	5/00	Gas handling apparatus (gas jars or cylinders B01L 3/12; cold traps, cold baffles B01D 8/00;
3/00	Containers or dishes for laboratory use, e.g. laboratory glassware (bottles B65D; apparatus for enzymology or microbiology C12M 1/00); Droppers (receptacles for volumetric purposes G01F) [1, 2006.01]	5/02	separation of gases or vapours B01D 53/00; gas generators B01J 7/00; steam traps F16T) [1, 2006.01] • Gas collection apparatus, e.g. by bubbling under
3/02	• Burettes; Pipettes [1, 2006.01]	5/04	water (for sampling G01N) [1, 2006.01]Gas washing apparatus, e.g. by bubbling [1, 2006.01]
3/04 3/06 3/08 3/10	 Crucibles [1, 2006.01] Crystallising dishes [1, 2006.01] Flasks (specially adapted for distillation B01D) [1, 2006.01] Wash bottles [1, 2006.01] 	7/00 7/02	Heating or cooling apparatus (evaporators B01D 1/00; drying gases or vapours, e.g. desiccators, B01D 53/26; autoclaves B01J 3/04; drying ovens F26B; furnaces, ovens F27); Heat insulating devices [1, 3, 2006.01] • Water baths; Sand baths; Air baths [1, 2006.01]

7/04 • Heat insulating devices, e.g. jackets for flasks [2010.01]

9/00 Supporting devices; Holding devices (tweezers, tongs B25B) [1, 2006.01]

9/02 • Laboratory benches or tables; Fittings therefor [1, 2006.01]

9/04 • Retort stands; Retort clamps [1, 2006.01]

9/06 • Test-tube stands; Test-tube holders [1, 2006.01]

99/00 Subject matter not provided for in other groups of this subclass [2010.01]
